## **Allwin Steel Ltd**

### **Health, Safety, Quality & Environment**

Allwin Steel is one of Auckland's most experienced and well respected mechanical engineering companies specialising in all fabrication, some project management and installation services. We have achieved Impac Prequal as our group standard.

Allwin Steel believes health, safety, quality and environmental best practice and the management of business risks are fundamental to the success of the company.

To achieve and maintain this we will:

- Pursue our ultimate goal of zero harm to people and the environment;
- Develop and review measurable objectives and targets that promote continuous improvement of our health, safety, quality and environmental systems and performance;
- Comply with, and where practical, exceed relevant statutory and other requirements applicable to the company;
- Provide our people and contractors with appropriate induction into the business and the necessary training and supervision to perform their roles;
- Seek to understand and meet our customer needs;
- Effectively communicate and consult with our people and contractors to obtain an agreed approach to manage workplace hazards and prevention of unsafe practices;
- Commit to the accurate reporting of all workplace incidents by all employees, subcontractors and managers;
- Prevent pollution and minimise any adverse effects of the operation of the business on the environment;
- Monitor and evaluate health, safety, quality and environmental systems, compliance and performance through regular auditing processes;
- Periodically review our policies and procedures to maintain their relevance.

To implement this policy, all managers are expected to provide leadership on health, safety, quality and environmental matters, and demonstrate their commitment through their actions. All employees and subcontractors are required to conduct their work in a best trade practices manner that does not compromise our policies and goals for health, safety, quality and the environment.
